Fortek Intelligent Series Ultra Low Light 8MP WDR  
3.6mm lens Fix Bullet Camera

## FORTEK INTELLIGENT SERIES

Fortek has launched a new series of AI network cameras with an advanced deep learning algorithm. These cameras excel in low-light conditions, offer superior image processing, and provide real-time deterrence against crime and unwanted behavior.

### KEY FEATURES

#### Easy Configuration

Easily and quickly enable a video analysis rule to start enjoying the simplicity and effectiveness AI performance. Users can easily enable an algorithm manually for specific use.

#### False Alarm Reduction

A new generation AI algorithm accurately senses and distinguishes human and vehicle movements from other moving objects, reducing false alarms.

#### Density Control by People Counting

Supports people counting when individuals enter and exit a specified area within a certain time frame.

#### Queue Management

A new generation AI algorithm can detect the number of people waiting in line and the wait time warning.

## AI FUNCTIONS

### Face Recognition

When a face is detected or recognized in the detection area, the system performs alarm linkage and supports searching face detection and recognition results.

### Pedestrian & Vehicle

Cameras automatically detect humans and vehicles through real-time video analytics and minimizing false alarms triggered by animals, falling leaves, heavy rain, and other moving objects.

## Intrusion

It is used to detect objects entering and loitering in a pre-defined virtual region.

## Region Entrance

It is used to detect objects entering a predefined virtual region from the outside place.

## Crossing Counting

It is used to detect people crossing a pre-defined virtual line, including entry number, exit number and stay number in area, and view the people counting data in report form.

## License Plate

When a motor vehicle triggers the rule line in the detection area, it will capture the license plate and report the attributes of the motor vehicle.

## Line Crossing

It used to detects objects crossing a user-specified virtual line in a specified direction.

## Region Exiting

It is used to detect objects exiting from a pre-defined virtual region.

## Object Detection

It is used to detect the objects left over in the pre-defined region or It detects whether the objects are removed from the pre-defined region.

## Crowd Density

Crowd density monitoring monitors the number of people in a specified area and triggers an alarm if the number exceeds the set alarm threshold.

## Queue length

Cameras trigger a notification when the number of persons in line or the wait time of each person exceeds thresholds set by operators.

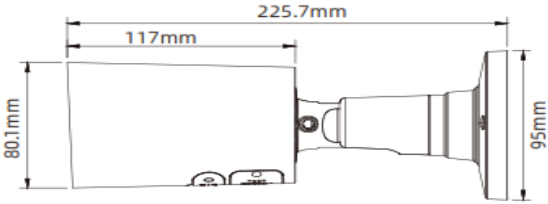

## Heat Map

Detect the distribution of moving objects in a target area over time and display it on a heat map, with blue for the lowest heat value and red for the highest.
